Politecnico di Torino Computer Engineering graduate (BSc) and aspiring PoliMi Internet Engineering candidate. Focused on high-availability network design and Layer 3 switching fabrics. Currently bridging theoretical communication systems knowledge with hands-on CCNA-level implementation.

Education

Politecnico di Torino, BSc in Computer Engineering September 2022 – March 2026

- **Special Focus: Network Infrastructure** (Protocols, Routing, and Switching), **Communication Systems Design**, Computer Architecture, Applied Electronics, Digital Circuit Design
- Graduation Average Grade: 88/110

Experience

Student Ambassador, Reply – Torino April 2024 – Present

- **Represented the company at events**, effectively bridging the communication gap between the organization and the technical student body.
- **Coordinated promotional and outreach campaigns**, demonstrating **organizational skills** and strict adherence to deadlines and project timelines. Supported company initiatives by managing assigned tasks autonomously and collaborating with diverse teams, ensuring successful execution of objectives.

Projects

Redundant Enterprise Campus Network Architecture

- Engineered a high-availability “Triangle” Core utilizing three Cisco 3650 Layer 3 switches to eliminate single points of failure and ensure perfect backbone resilience.
- Manually tuned **Spanning Tree Protocol (STP)** priorities (4096, 8192, 12288) and aggregated bandwidth via **LACP (802.3ad) EtherChannels** for optimized, deterministic, and loop-free path selection.
- Configured **Inter-VLAN Routing** via **Switched Virtual Interfaces (SVIs)** and implemented **DHCP Relay** (ip helper-address) to provide dynamic IP allocation across segmented Student (VLAN 10), Staff (VLAN 20), and Management (VLAN 99) subnets.
- Hardened the Access Layer with **BPDU Guard** and **PortFast** on edge ports and applied **Root Guard** on core downlinks to protect the integrity of the spanning-tree topology.
- Established a **Point-to-Point /30 Transit Link** via “no switchport” routed interfaces to a Cisco ISR4321 Router, configuring **Static Routes** for end-to-end ICMP reachability to external WAN infrastructure.

Enterprise Multi-Site Network Architecture

- Deployed a Hub-and-Spoke WAN using **802.1Q encapsulation (Router-on-a-Stick)** for secure department segmentation.
- Optimized IP space via **VLSM** (/28 LANs, /30 links) and configured **Static Routing** for end-to-end reachability to DNS (8.8.8.8).

Skills

-
- **Certification:** Cisco Certified Network Associate (CCNA) - In progress.
 - **Networking & Security:** Layer 3 Switching (SVIs), RPVST+, LACP(802.3ad) EtherChannel, STP Tuning (Root Bridge/ Priority), DHCP Relay, 802.1Q Tagging, VLSM, Static Routing, BPDU Guard, Root Guard, PortFast, TCP/IP, Cisco IOS.
 - **Programming & Tools:** C, Java, Python, MATLAB, Cisco Packet Tracer, GitLab, Oracle SQL Server, Microsoft Office.
